

EVEN THE  
SMALLEST HOUSE IS FULL  
OF PRECIOUS POSSESSIONS

SIMON.

A SECURITY

SYSTEM FOR

TODAY'S

LIFESTYLES.

**EVERYONE** deserves security they can count on. The solution is Simon™. The Simon wireless security system is affordable, reliable and easy to use. Simon provides peace of mind for everyone.

From basic burglary protection to sophisticated lighting control, Simon is flexible. It's the perfect companion.

Affordable in price, Simon is rich in protection features. The system has state-of-the-art controls and finely-tuned sensors. That means reliability you can trust.

Because Simon is a wireless system, it is easy to install and is easily upgraded as your needs change. Unlike hardwire systems, there is no need for holes to be drilled or miles of wire to be threaded through walls. In addition, Simon is portable. When you move, you can take Simon with you.

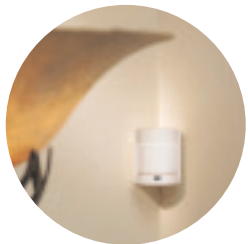

So, no matter what you call home, you can protect your most precious possessions with Simon.

## SIMON IS SENSITIVE

**S**imon uses sensors to monitor your daily living environment.

- Door/window sensors to detect unwanted intrusions.
- Indoor and outdoor motion sensors to sense movement within the home or outdoors, including decks and patio areas.
- Smoke sensors to detect and report a fire.
- Lights can be turned on at scheduled times or when you walk into a room.
- Additional environmental sensors such as carbon monoxide and freeze detection.

## SIMON KEEPS WATCH OVER YOU

Whenever the system detects a problem, a message is transmitted to the Central Monitoring Station.

- A window is forced open in the middle of the night.
- A fire breaks out while you are sleeping.
- An intruder is lurking around your patio furniture.
- The furnace breaks down, sending deadly carbon monoxide gas through the home.
- Your 11-year-old is late coming home from school.

The monitoring station, staffed 24-hours daily by trained professionals, will dispatch the appropriate help immediately.

Most importantly, during this entire transmission, your Simon system will sound a chime or alarm in your home, alerting you to the situation so that you may act quickly and accordingly.

Your monitored Simon system keeps a watchful eye while you're at home, or away.

## SIMON KNOWS ABOUT KIDS

M

ore and more working parents are finding it necessary to have their children come home to an empty house. Having these 'latchkey' kids home alone can be worrisome for parents. Simon is the perfect security solution. For instance, when your children arrive home, they merely disarm the security system. If the system hasn't been disarmed by a programmed time, Simon will notify the central monitoring station. While they are home, Simon will monitor the premises, protecting them from potential dangers. In addition, the control panel can be programmed to call your office or pager alerting you if they have not arrived home during the preset time.

## SIMON LIGHTS YOUR WAY

Experts agree well-lighted areas are a deterrent to crime. Simon can control your lights whether you're home or away. Schedule your lights to come on or go off, or use Simon to turn lights on as you enter a room. With Simon at your fingertips, there's no need to walk through dark rooms or hallways. Simon lights the way.

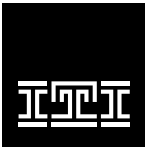

## SIMON IS YOUR SECURITY COMPANION

Every day you're faced with tough decisions. Whether or not to have a security system to protect you and your family is an easy decision. Which one to buy however, can be difficult. That's why we created Simon. You want a system that's so easy to learn a child can do it. You want a system that can control your lights when you're home or away and you want a system that can expand as your needs change. Simon makes your choice easy.
